

BHANWAR KUMAWAT

AI Software Developer | Frontend Engineer — React.js & Next.js Specialist

Bikaner, Rajasthan, India | +91 6376736945 | bhanwarlalkumawat846@gmail.com | [GitHub](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Frontend Engineer who **architects and ships** production AI platforms end-to-end. Specialist in **React.js, Next.js, and TypeScript** inside **Nx monorepos** — engineering reusable hook systems, real-time UIs on **Centrifugo**, and rigorous AI agent testing across **four live products**. Known for turning complex, real-time AI systems into fast, polished, dependable interfaces.

KEY HIGHLIGHTS

- **4 Production Platforms** — sole/primary frontend owner across unpod.ai, unpod.dev, app.unpod.ai, and admin.unpod.tv, all built from one shared **Nx monorepo**.
- **<330ms Latency** — engineered real-time conversation & agent-status UI on a **Centrifugo WebSocket** layer for seamless AI-driven interactions.
- **50+ Component Library** — built and published **HeroUI Blocks**, a reusable, accessible UI kit adopted to speed up new project builds.
- **Reusable Hook Architecture** — designed a shared **custom React hooks** system (data fetching, real-time subscriptions, auth, form state) reused across 4+ products.

PROFESSIONAL EXPERIENCE

AI Software Developer | ZestGeek Solutions Pvt. Ltd.

Sep 2025 – Present

- **Drive frontend architecture and delivery** across Unpod AI's entire product suite — unpod.ai, unpod.dev, app.unpod.ai, and admin.unpod.tv — engineered end-to-end with **Next.js, React.js, and TypeScript** in a shared **Nx monorepo**.
- **Architect a reusable custom React hook system** (data fetching, real-time subscriptions, form state, auth) consumed across all four products, cutting duplicate code and speeding up feature delivery.
- **Engineer the real-time frontend layer with Centrifugo** (WebSocket), powering live conversation feeds, agent status updates, and real-time analytics dashboards at production scale.
- Build AI agent management dashboards and workflow automation UI spanning voice, WhatsApp, and email channels, styled with **Ant Design** and **styled-components**.
- **Own AI agent testing end-to-end** — validating agent responses and conversation behavior through the UI — alongside functional and cross-browser testing across all four production platforms.
- Manage sprints in **Jira** and version control across **Git/GitLab**, while continuously optimizing frontend performance and the shared component library.

MERN Stack Developer | G-Axon Tech Pvt. Ltd.

Jan 2025 – Aug 2025

- **Shipped scalable, production-ready frontend features** using React.js, integrating and consuming REST APIs at scale.
- Improved UI/UX through performance-focused optimization and a growing library of reusable components.

Frontend Developer | iWebwiser Pvt. Ltd.

- **Built high-performance dashboards** and complex multi-step forms with robust state management.
- Focused on accessibility, responsiveness, and clean, maintainable code across every feature shipped.

PROJECTS

Unpod AI (unpod.ai) — *Next.js, React.js, TypeScript, Nx Monorepo, Ant Design, Styled Components*

- Primary marketing and platform site for Unpod's AI telephony & speech infrastructure — the first touchpoint where organizations discover the product and sign up.
- **Engineered fast, responsive** landing, product, and onboarding pages, tuned for performance and conversion across devices and browsers.
- Kept the site in sync with Unpod's design system, sharing components and styling with the rest of the product suite through the **Nx monorepo**.

Unpod Developer Platform (unpod.dev) — *Next.js, React.js, TypeScript, Nx Monorepo, Ant Design, Styled Components*

- Developer-facing portal for Unpod's metered telephony + speech infrastructure, covering documentation, API access, and account sign-in/auth.
- **Built integration and configuration screens** — API keys, telephony setup, webhook management — used daily by developers and technical teams.
- Tested authentication and configuration flows across browsers to keep the developer experience smooth and dependable.

Unpod App (app.unpod.ai) — *Next.js, React.js, TypeScript, Nx Monorepo, Ant Design, Styled Components, Centrifugo*

- Core product application ('SuperDialog') where teams run and manage live AI voice, WhatsApp, and email agents end-to-end.
- **Engineered real-time dashboards** for conversation management, agent monitoring, and analytics — powered by reusable custom hooks and a **Centrifugo WebSocket layer**, achieving **<330ms latency** for seamless AI-driven interactions.

- **Owned AI agent testing** on the platform end-to-end — verifying agent responses, conversation flows, and edge cases through the UI before every release.

Unpod Admin (admin.unpod.tv) — *Next.js, React.js, TypeScript, Nx Monorepo, Ant Design, Styled Components*

- Internal admin/back-office panel giving the team control over organizations, workspaces, and platform-wide settings across all four Unpod products.
- Built role-based dashboards and access-control screens, keeping internal operations reliable as the product suite scaled.
- Ran focused regression and functional testing on admin flows to prevent permission or data-access issues from reaching production.

Geneffic — *Next.js 16, React 19, Styled Components, Ant Design, Centrifugo*

- AI-first business discovery platform (geneffic.com) that helps businesses get found and recommended inside ChatGPT, Claude, Gemini, and Perplexity.
- **Built the AI profile creation flow**, business analytics dashboard, and a live conversation feed that auto-refreshes in real time using **Centrifugo** on the frontend.
- Focused on making live engagement signals — questions asked, platforms used, conversion funnel — feel instant and effortless to read for non-technical business owners.

HeroUI Blocks — *Next.js 15, React 18, Tailwind CSS*

- **Built and published a 50+ component library** — buttons, forms, cards, navigation, and layout primitives — designed for high customization and accessibility.
- Engineered each block to drop into any Next.js/Tailwind project with minimal setup, cutting UI build time on new projects.

School Management System — *React.js, Reusable Hooks*

- Full-featured platform UI for schools, covering student/teacher management, organizational charts, and QR-code-based attendance.
- **Built reusable hooks and components** to power multiple role-based dashboards (admin, teacher, student) from a shared codebase.

TECHNICAL SKILLS

Frontend: React.js, Next.js (14/15/16), TypeScript, JavaScript (ES6+), Tailwind CSS, Ant Design, Styled Components, Nx Monorepo

Real-Time & Architecture: Centrifugo (WebSocket/Real-Time UI), Custom Reusable React Hooks, Component Libraries, REST API Integration

Testing & QA: AI Agent Behavior Testing, Manual & Functional Testing, Cross-Browser Testing, UI/UX QA, Debugging

Tools & Workflow: Git, GitHub, GitLab, Jira, VS Code, WebStorm, Postman, Figma
